

EYAD ELBAHA

Software Engineer · Full-Stack · AI / ML & Data Engineering

Sharjah, UAE · +971 50 565 3887 · eyad.elbaha@gmail.com · linkedin.com/in/eyad-e-31222123a

PROFILE

Computer Science student at the American University of Sharjah who has shipped production AI systems inside a major petrochemical enterprise. Sole developer of an end-to-end machine-learning demand forecasting platform now used for supply-chain planning at Borouge (ADNOC Group), alongside deployed AI agents, a voice-driven RAG system and enterprise Power BI reporting. Equally strong across the full stack — React/Next.js, Node, Python, SQL, Azure — and biased toward building things that reach real users.

EXPERIENCE

AI & Data Engineering Intern · Borouge (ADNOC Group)

Jun 2026 – Aug 2026

Python · Scikit-learn · TreeSHAP · Azure · Power BI / DAX · RAG · LLMs · Copilot Studio · SharePoint

- Owned the function's flagship ML build as sole developer — the end-to-end AI demand forecasting platform now used for supply-chain planning, shipped ahead of schedule and presented to senior leadership (detailed under Projects).
- Architected a **voice-activated RAG system** over HSE manuals so field workers retrieve safety-critical answers hands-free in real time, instead of searching hundreds of pages of PDF.
- Built two enterprise **Microsoft Copilot Studio agents** — Regulation Radar (regulatory change tracking) and Claims Checker (marketing-claim verification) — off a gap analysis proving no existing ADNOC-group agent was external-facing or Borouge-specific.
- Delivered **enterprise Power BI dashboards** on star-schema models with complex DAX measures and KPI reporting, plus end-to-end analysis of operational datasets driving cross-functional decisions in a regulated industrial environment.

PROJECTS

Supply Chain Demand Forecasting Platform · Borouge (ADNOC Group)

2026

Python · Scikit-learn · TreeSHAP · Azure · ERP Data Pipelines · Power BI / DAX

- Sole developer of an end-to-end demand forecasting platform now in use for supply-chain planning** at a major petrochemical producer — ERP extraction, feature engineering, model training, backtesting and deployment, delivered ahead of an eight-week schedule.
- Took requirements directly from the Supply Chain planning team and built the evaluation design around **the metrics the business actually runs on** — WMAPE, forecast bias, MAE/RMSE and forecast value-add — rather than generic model scores.
- Built the **explainability and trust layer**: TreeSHAP attribution converted into plain-language driver narratives so planners can see **why** a forecast moved, plus automated drift monitoring on live inputs.
- Presented the full system and its accuracy results to **senior leadership**, then handed it to the business complete and in production use.

HSE Campaign Intelligence Agent · Borouge (ADNOC Group)

2026

AI Agents · LLMs · Copilot Studio · SharePoint · Process Design · Business Case Modelling

- Designed an AI agent covering the **full HSE (Health, Safety & Environment) campaign lifecycle** plus incident and feedback handling — scoped jointly with the HSE department to strip manual man-hours and human error out of safety-critical workflows.
- Deliberately scoped **past a policy-document Q&A bot** to an agent that acts on the campaign lifecycle itself, delivered through SharePoint so it lands inside the tooling the department already works in.
- Built the cost model and business case behind it and **pitched the system directly to the SVP of HSE**; currently under assessment for build.

MedConnect · Full-Stack Healthcare Management Platform

2025

React · Node.js · Express · JWT · REST · node-cron

- Multi-role platform spanning **patients, doctors, pharmacists, hospitals and insurers** with role-based JWT authentication and route protection enforced on both client and server — zero privilege-escalation paths found in code review.
- Engineered **20+ RESTful endpoints** and an automated cron scheduler firing medication reminders at 8am/8pm and raising refill warnings 7 days out — fully hands-free.

Customer Lifetime Value Prediction · Applied ML Research

2024

Python · Scikit-learn · Neural Networks

- Trained and benchmarked **three models** (Linear Regression, SVM, Neural Network) on real customer data; feature engineering, outlier removal and normalisation cut MSE by **20%+** against baseline, with the Neural Network taking the highest R².

CampusMart · Peer-to-Peer Marketplace

2024

Java · SQL · REST

- Architected a campus marketplace in Java on clean **object-oriented design** — normalised relational schema across 5+ entities, secured endpoints for auth/search/orders, zero known vulnerabilities in peer review.

TECHNICAL SKILLS

Languages: Python · Java · JavaScript · TypeScript · SQL · C++ · R

Web & Backend: React · Next.js · Node.js · Express · RESTful APIs · JWT Auth · HTML5 · CSS3 · Tailwind

AI, ML & Data: Scikit-learn · Neural Networks · SVM · TreeSHAP · Time-Series Forecasting · RAG · LLM Integration · AI Agents · Pandas · Power BI · DAX

Cloud & Tooling: Microsoft Azure · Copilot Studio · Git · CI/CD (Vercel) · Docker · Linux · VS Code

Practices: SDLC · OOP · Data Structures & Algorithms · Agile · Code Review · Testing & Debugging

EDUCATION & LEADERSHIP

B.Sc. Computer Science · American University of Sharjah, UAE

Expected May 2027

Coursework: Data Structures & Algorithms · OOP · Databases (SQL) · Software Engineering · Computer Networks

Vice Chairman, Intern Committee · Borouge International — elected representative for the full intern cohort

2026

Captain, University Basketball Team · AUS — 12-person roster, +30% win rate, ACG Tournament (Greece)

2023 – Present
